We all know that cars have their negative side. Air pollution, global warming, and car crashes—not to mention insurance payments, car repairs, and rising gas prices—are just some of the costs we pay to drive our cars. This doesn't even count the time wasted sitting in traffic jams! Unfortunately, because of the way our cities are built, it's almost impossible to survive without a car.

### *CarFree City, USA will make it possible*

Imagine living in a place where **all** your daily needs could be met within a 5-minute walk. Doesn't that sound appealing?

Carfree City, USA's goal is to create carfree areas in the United States. We do not want to force anyone out of their car - it's not necessary. We believe there are millions of Americans who would prefer to live without the hassles of a car, and we want to provide them with that option.

If you think this sounds like a good idea, we hope you will show your support by **registering** on our website and **donating** some time or money to help us reach our goal.
